

Bulletin 845P Optical Incremental Encoders

NEMA Type 1, Size 15, High Performance

Servo Mount
845P-SHC14-CN3

Description

Bulletin 845P optical incremental encoders convert shaft rotation into an electronic digital format. The encoder output (square wave pulses) provides an accurate means of digitizing position, velocity, and direction of rotation. Various position and motion controllers can then compare this information to desired settings, and control the system accordingly.

The Bulletin 845P is a size 15 industrial incremental encoder. The NEMA Type 1 aluminum enclosure provides protection against incidental contact with dirt, dust, lint, fibers, and other nonliquid contaminants. The electronics offer dual channel encoder signals in quadrature, with a standard gated index. The encoder provides differential output signals at 100kHz, with code disk resolution of 500 or 1000 pulses per revolution.
