

Features

- ☑ Designed for SONET/SDH OC-48/STM-16 (2.5 Gb/s) 1550 nm (“C” & “L” Band) DWDM operation
- ☑ ITU-grid wavelength compliance
- ☑ Eye Safe (Class I Laser Safety)
- ☑ 100 GHz wavelength spacing
- ☑ Long Reach 1550 nm (80 km)
- ☑ Two wavelength selectable for each transmitter module
- ☑ Clocked or Non-clocked operation
- ☑ Low profile, compact 24-pin package
- ☑ -20°C to +70°C Operating Case Temperature
- ☑ Single +3.3 V supply or Dual supply (+3.3 V and +5.0 V)
- ☑ AC-coupled DATA & CLOCK interface

Description

The DWTX-48 Laser Transmitters are designed to meet or exceed the SONET/SDH standards for OC-48/STM-16 Long Reach 1550 nm (80 km) specifications. The transmitter incorporates a highly reliable (1550 nm) InGaAsP MQW DFB Laser with an operating wavelength in full compliance with 100 GHz (0.8nm) spacing per ITU-grid. One particular advantage of the DWTX-48 transmitters is that each transmitter module can be operated at one of two wavelength (“n” and “n-1”). This wavelength selection is controlled via a Wavelength Select input. All modules satisfy Class I Laser Safety requirements in accordance with the US FDA/CDRH and international IEC-825 standards.

The transmitters are AC coupled with 50 ohms internally terminated and it could operate in Clocked or Non-Clocked mode operation. Also, the transmitters are provided with additional functions such as Disable inputs, LD Degradation Alarm, and Wavelength Deviation Alarm signals.

The DWTX-48 transmitters are contained in a compact, low-profile 24-pin package (with 2 pins removed). They are available with two supply voltage options: single +3.3V or dual +3.3V & 5.0V, over an operating case temperature range of -20°C to +70°C.

Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
Operating Case Temperature	T_{op}	- 20	+ 70	°C
Storage Temperature	T_{st}	- 40	+ 85	°C
Supply Voltage	V_{CC}	0	+ 7.0	V
	V_{TEC}	0	+ 3.5	
Lead Soldering Temperature & Time	-	-	260°C, 10 sec	

DWTX-48

Transmitter Performance Characteristics (over Operating Case Temperature)

Parameter	Symbol	Minimum	Typical	Maximum	Units
Data Rate	B	0.15	2.488	3.0	Gb/s
Average Optical Output Power (50% duty cycle)	P_{o_BOL}	0	-	+ 2.0	dBm
	P_{o_EOL}	- 2.0	-	+ 3.0	
Extinction Ratio	P_{hi}/P_{lo}	8.2	-	-	dB
Center Wavelength	λ_c	see Ordering Table			-
Center Wavelength Accuracy	$\Delta\lambda_c$	- 0.05	-	0.05	nm
Spectral Width (-20 dB)	$\Delta\lambda_{20}$	-	0.3	0.5	
Side Mode Suppression Ratio	$SMSR$	30	-	-	dB
Dispersion Penalty ¹	-	-	-	2.0	dB
Intrinsic Jitter	-	-	-	0.05	Ulp-p
Optical Output Eye	compliant with Bellcore TR-NWT-000253 and ITU-T Recommendation G.957				
¹ Measured with 1600ps/nm dispersion (approximate worst case dispersion for 80Km of G.652/G.654 fiber per ITU-G.957).					

Transmitter Electrical Interface (over Operating Case Temperature Range)

Parameter	Symbol	Minimum	Typical	Maximum	Units	
Input Voltage (DATA & CLOCK)	V_{IN}	0.13	0.45	0.65	Vp-p	
Input impedance	Z_{IN}	-	50	-	ohm	
MODE SELECTOR Input Voltage	Clocked	V_{MSCK}	0	-	0.8	V
	Non-Clocked	V_{MSNCK}	2.0	-	V_{CC}	V
Transmitter Disable Voltage	V_{DIS}	2.0	-	V_{CC}	V	
Transmitter Enable Voltage	V_{EN}	0	-	0.8	V	
λ Selection	Ch(n) Selection	$V_{\lambda SELH}$	0	-	0.8	V
	Ch(n -1) Selection	$V_{\lambda SELL}$	2.0	-	V_{CC}	V
λ Deviation Alarm Voltage	HIGH Voltage	$V_{\lambda ALMH}$	2.7	-	V_{CC}	V
	LOW Voltage	$V_{\lambda ALML}$	0	-	0.3	V
LD Degradation Alarm Voltage	HIGH Voltage	V_{ALMH}	2.7	-	V_{CC}	V
	LOW Voltage	V_{ALML}	0	-	0.3	V
Laser Bias Monitor Voltage	V_{BM}	-	20	-	mV/mA	
Laser Back Facet Monitor Voltage	V_{FM}	-	500	-	mV/mW	

Electrical Power Supply Characteristics (over Operating Case Temperature Range)

Parameter	Symbol	Minimum	Typical	Maximum	Units	
Supply Voltage	Single Supply	V_{CC}, V_{TEC}	3.15	3.3	3.45	V
	Double Supply	V_{CC}	4.75	5.0	5.25	
		V_{TEC}	3.15	3.3	3.45	
Supply Current (Transmitter)	I_{CC}	-	135	180	mA	
Supply Current (TEC)	I_{TEC}	-	0.4	1.2	A	
Input DATA & CLOCK timing	T_{SETUP}	100	-	-	ps	
	T_{HOLD}	100	-	-		

Laser Safety: All transmitters are Class I Laser products per FDA/CDRH and IEC-825 standards. They must be operated under specified operating conditions.

Optical Communication Products, Inc.

DATE OF MANUFACTURE:

MANUFACTURED IN THE USA

This product complies with

21 CFR 1040.10 and 1040.11

Meets Class I Laser Safety Requirements

DWTX-48

Application Notes

DATA+ and DATA- : Data input interface is AC coupling with internal 50 ohm termination.

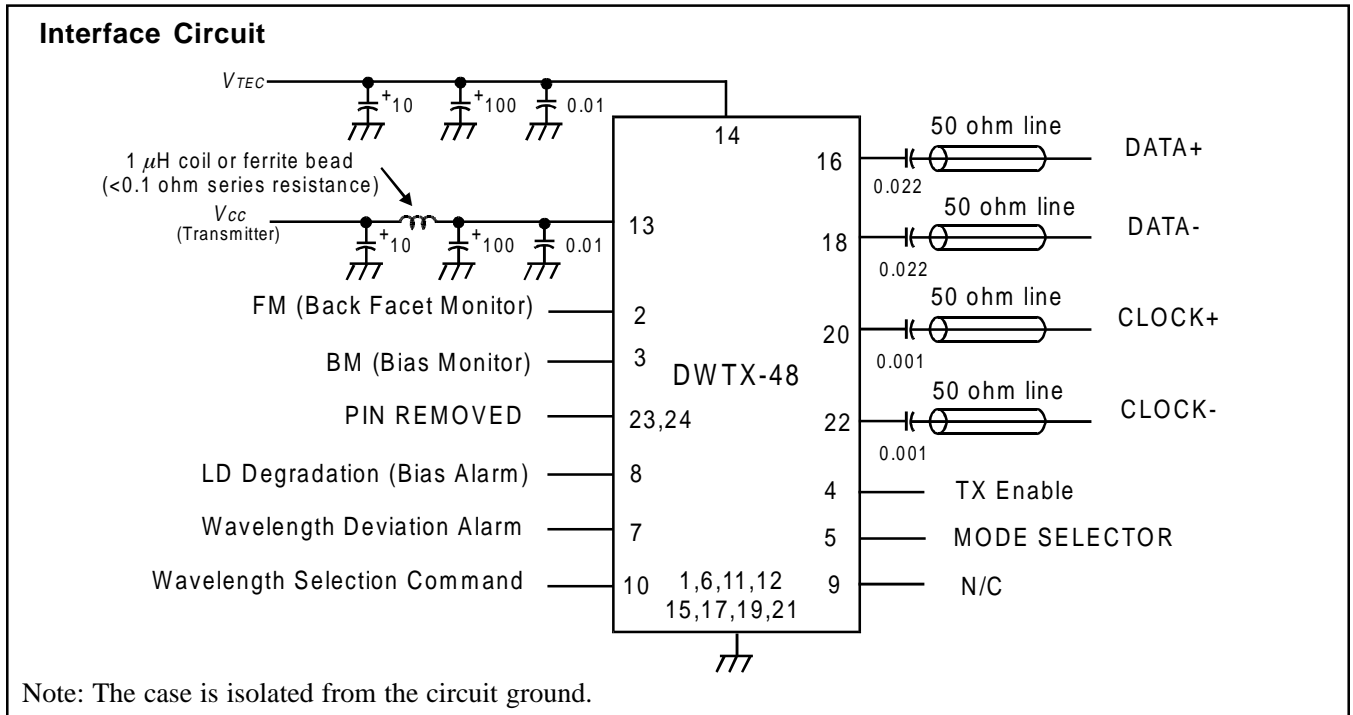

TX Enable: The transmitter is normally enabled (i.e. when the TX Enable control input is not connected). When the TX Enable control input voltage is higher than 2 V, the laser is turned off independent of the input data.

MODE SELECTOR: When the input is at logic “LOW” (0 to 0.8V), the transmitter is in clocked operation mode. In this mode, the input clock re-synchronizes the incoming data to reduce timing jitter. The timing between the DATA and CLOCK inputs is as shown. When the MODE SELECTOR input at logic “HIGH” ($V_{cc} - 2V$ to V_{cc}), the transmitter is in non-clocked operation mode. In this mode, the CLOCK inputs are not used and hence need not be provided.

Wavelength Selection Command: When the input command is at logic “LOW” (0 to 0.8V), or no connection, the transmitter operates on channel “n”. When the input command is at logic “HIGH” (2V to V_{cc}), the transmitter operates on channel “n-1”.

Wavelength Deviation Alarm: The transmitter normally operates on channel “n” or “n-1”. If wavelength deviates for any reason, the output voltage will be logic “HIGH” (2.7 to V_{cc}). Normally the output voltage is at logic “LOW” (0 to 0.3V), when the transmitter operating at correct wavelength. Load must exceed 10K Ohms.

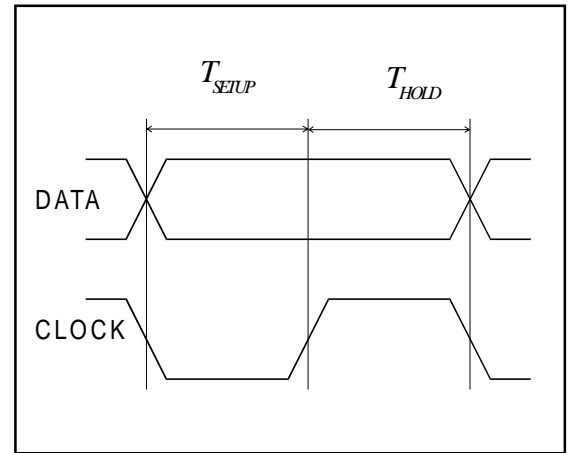

LD Degradation Alarm: When the output is at logic “HIGH” (2.7 to V_{cc}), it indicates that LD is degrading. Otherwise, the output voltage will stay logic “LOW” (0 to 0.3V). Load must exceed 10K Ohms.

Pin Assignments

PIN	FUNCTION	PIN	FUNCTION
1	GND	24	PIN REMOVED
2	FM (Back Facet Monitor)	23	PIN REMOVED
3	BM (Bias Monitor)	22	CLOCK -
4	TX Enable	21	GND
5	MODE SELECTOR	20	CLOCK +
6	GND	19	GND
7	Wavelength Deviation Alarm	18	DATA -
