

BR24C08/F/FJ/FV

BR24C16-W/F-W/FJ-W/FV-W <Under development>

Features

- 8k bit serial EEPROM organized as $1k \times 8\text{bit}$ (BR24C08)
16k bit serial EEPROM organized as $2k \times 8\text{bit}$ (BR24C16)
- 2 wire bus serial interface
- Wide operating voltage range (3V operating)
Read : 2.7~5.5V
Write : 2.7~5.5V
- Low current consumption
Active: 3mA MAX ($V_{cc}=3\sim 5V$)
Standby : 3 μA MAX ($V_{cc}=3\sim 5V$)
- Clock frequency : 100kHz MAX(3V), 400kHz MAX(5V)
- Write cycle time : 10ms MAX ($V_{cc}=3V, 5V$)
- Address auto-increment function during read operation
- Automatic erase-before-write function during write operation
- Page write function : 16 byte
- Inadvertent write protection function
Inadvertent write protection at low voltage (V_{cc} Lock-out function)
WP(Write Protect) function
- Schmitt trigger circuit and noise filter are built into SCL and SDA pins
- 100,000 write cycle typical
- 10 years data retention
- Operating temperature range : $-40\sim 85^{\circ}\text{C}$

Pin Configurations

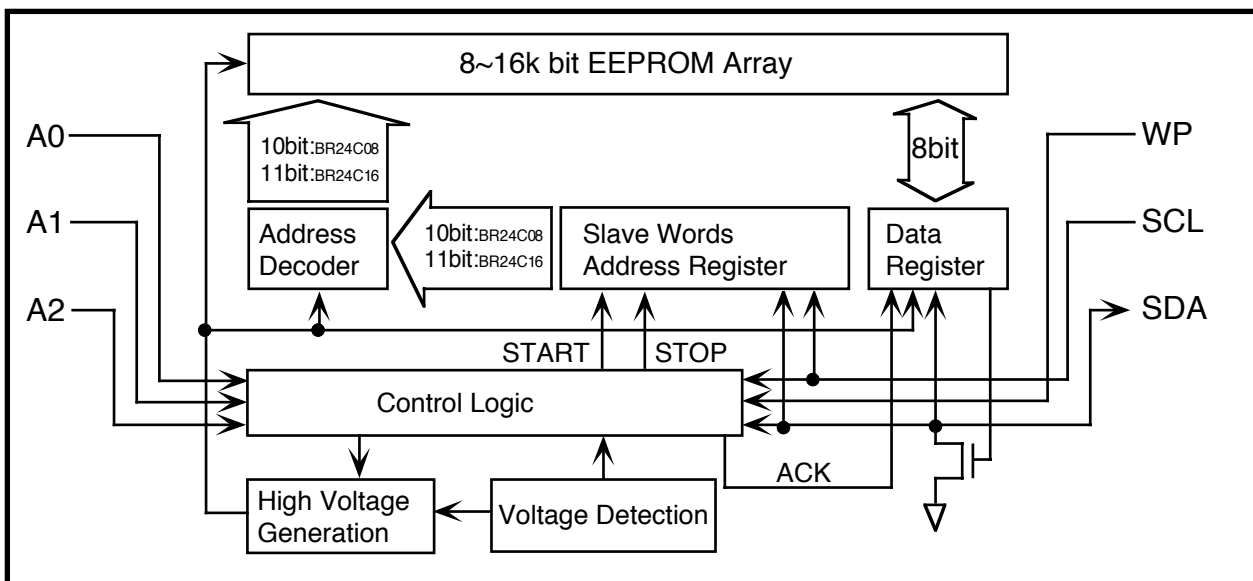

DIP8/SOP8/SOP-J8/SSOP-B8

Pin Functions

Pin Names	Functions
A0, A1, A2	Slave Address Inputs
GND	Ground
SDA	Serial Data Input/Output
SCL	Serial Data Clock
WP	Write Protect
Vcc	Power Supply

■ Current read cycle

■ Random read cycle

■ Sequential read cycle

*1: P2 (BR24C16)

Note : Double-cell type (BR24C08/F/FJ/FV).
Single-cell types (BR24C16/F/FJ/FV).
"-W" means double-cell type.
